

SESEC Interpretation:
Management Catalogue of Production Licenses
for Industrial products and
Its Recent Simplified Approval Process

Betty Xu
November 2018

Beijing

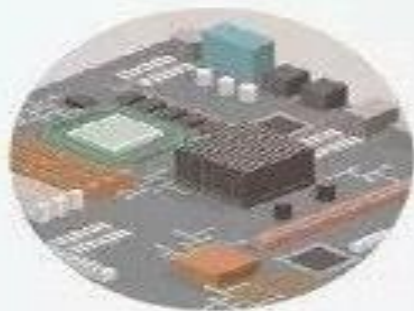

How to implement the "Decision of the State Council on Further Regulating the Catalogue of Management of Production Licenses for Industrial Products and Simplifying the Approval Process"?

The requirements of State administration of market regulation (SAMR) -

I.

Resolutely abolish the management of production licenses for 14 types of industrial products

Fasteners for building steel pipe scaffolding

Manmade board

Feed crushing machinery

Light and small lifting and transportation equipment

Construction winch

Tower and mast for broadcast communication

Hydraulic metal structure

Port cargo handling machinery

Survival equipment

Read-write heads of IC card and IC card

Refrigeration equipment
(excluding refrigerator with a calibrated volume of more than 500)

Air compressor

Gas appliances (excluding gas stoves and gas water heaters)

Stop the acceptance, examination and approval of the production licenses of above-mentioned products.

Continue or disguised production licenses shall not be allowed in any form.

Explosion-proof electric

Gas appliances

(domestic gas cookers, domestic gas fast water heaters, gas heating water heaters)

Large refrigerator with a calibration volume of 500L or more
(Home refrigerator freezer products in the freezer unit of the refrigeration equipment product)

Was converted into compulsory product certification management

II.

Delegate the licensing and approval authority to lower levels

1

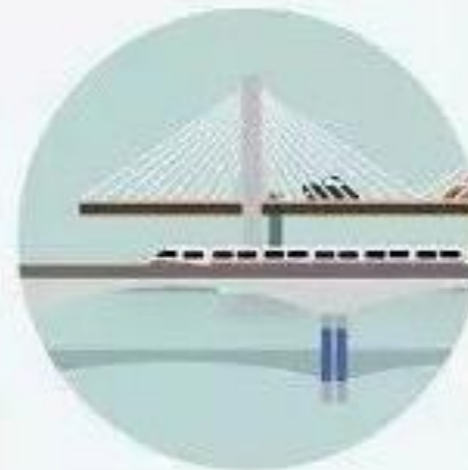

Since December 1, 2018, four types of products, such as

internal combustion engines,
friction materials

sealing products,

highway bridge bearings,

anti-counterfeiting
technology products,

are subject to the approval of the provincial market supervision department.

The production license application for these four types of products accepted before **December 1** is subject to the approval and certification procedures by the SAMR.

III. Comprehensively simplify the approval process

1

For the 24 types of products that continue to implement production license management, the product inspection before the issuance of certificates will be cancelled immediately nationwide. And change it to the inspection report made by the company within one year before the application.

2

In accordance with the “Notice of the State Council on Promoting the Reform of “Separation of Licenses” in the Whole Country”, food-related products are subject to notification and approval in the country.

3

Since December 1, 2018, other provincial-level certification products other than hazardous chemicals have been post-site reviewed throughout the country in accordance with the method of optimizing access services. The company submits the application and product inspection conformity report and makes a commitment to guarantee quality and safety. After the formal examination is passed, the certificate can be obtained.

4

After the issuance of the new implementation rules, the on-site review shall, in accordance with the requirements of the new revised implementation rules, focus on the inspection of necessary equipment, raw materials entering the factory, factory inspection and other systems, as well as corporate commitments.

5

Strictly implement the "on-site inspection exemption" policy for enterprises who have to renew their licenses and promise that no production condition changes.

6

Provinces with conditions can further simplify the application materials.

IV.

Further strengthen the in-thing and post-event supervision

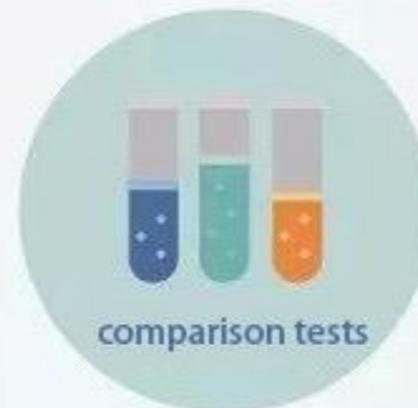

1

Publish the commitments and inspection reports of enterprises and accept social supervision.

2

In accordance with the "double random" requirements

standardize inspection behavior.

3

Increase the withdrawal of unqualified enterprises.

4

social credit system

Increase the frequency of inspections and random inspections, and incorporate the results of the random inspection into the social credit system.
